

## NIS2 – Securing Society

The purpose of the new EU directive NIS2 is to ensure vital functions on which we all depend – as people, as a society and as corporations.

AFRY can manage your entire security posture and help you to implement proportional measures. The security measures must always be adapted to the business needs and specific conditions. AFRY's unique experience and knowhow in a wide range of industry segments combine the up-to-date technical expertise in digital services and cyber security. We can secure the resilient management of our client's IT/OT by supporting any necessary adaptations of a systematic security work process and by providing the means of full compliance.

We can help you on your NIS2-journey:

- Regulatory analysis to identify the unique requirements for your business based on NIS2 and other new EU requirements as well as national legislation and industry standards
- Asset and information classification
- Gap analysis of management systems and operational processes to provide you with an actionable plan
- Review and assess your security measures, both technical and organizational
- Implement security measures, both technical and organizational
- Educate and train your staff and leadership team
- Abilities in business continuity and crisis management
- Strong incident management

In addition to understanding the operations and the systems used, it is also necessary to understand organizations, leadership and change management in order to get the desired outcome.

### CUSTOMER BENEFITS

- Compliance with legislation
- Increased resilience
- Risk-based security management
- Improved security culture
