

## Delivery Models – R&D services

To address the growing demand for outsourced R&D assignments, AFRY has positioned itself as a reliable solution provider over the past 25 years.

We excel in delivering tailored solutions through an efficient methodology adaptable to any client's requirements, in a broad range of sectors: Automotive, Telecom, Defence, Med-Tech, Energy, Mining, and Manufacturing.

### Tailored solutions for your specific needs

In response to diverse client needs, AFRY offers a range of delivery models. The setup will be customised and optimised for the specific assignment, aligning with the client's preferred level of involvement.

#### 1.1 Professional and Expert Services

Our Professional and Expert Services offer straightforward consulting solutions, placing you in control. AFRY's consultants are skilled experts in various technical fields, who seamlessly integrate into your project teams or provide specialised services. By leveraging their expertise, you not only solve technical problems but also gain insights that future-proof your projects against rapidly evolving technological landscapes.

#### Benefits

- Access to highly skilled professionals
- Seamless integration into project teams
- Expertise in solving complex technical problems
- Flexible support tailored to your needs

## 1.2 Agile Teams

Our Agile Teams are agile groups of 3 to 10 individuals, handpicked to efficiently address your tasks. The model can flexibly adapt to suit agile and non-agile contexts. Whether you need to scale up capacity or solve specific challenges, our cross-functional teams deliver results. The teams operate in time-boxed “sprints” to ensure that your objectives are met with speed and precision.

### Benefits

- Rapid scalability without adding load on own management
- Structured team compilation and collaboration methods
- Superior team performance through structured KPI follow-up and adaption
- Superior performance compared to in-house teams
- High-value teams adaptable to project evolution

## 1.3 Projects

Projects are ideal for tasks with clearly defined deliverables, typically outlined in existing systems, processes or project documentation. Unlike team-based delivery models, projects involve recruiting resources to work within a specified timeframe, with team members contributing on both part-time and full-time bases.

With effective project governance, we direct, control, and coordinate the project to align with strategic goals, manage risks, protect intellectual property, and ensure quality for successful project outcomes.

### Benefits

- Clear project alignment with strategic goals
- Effective risk management
- Assurance of quality according to project requirements
- Strong commitment to project success through structured collaboration models

## 1.4 Product Lifecycle Management (PLM)

Product Lifecycle Management (PLM) involves overseeing the entire lifespan of a product or service, from concept, design, development, production, maintenance, support, and eventually, the end of its lifecycle. We provide two main delivery models:

1. Fully outsourced PLM: Assuming responsibility for all product generations, past, present, and future.
2. Maintenance and Support: End-stage maintenance and support.

Our aim is to relieve clients of product-related tasks, enabling you to focus on strategic activities. Outsourcing such responsibilities is common for non-core products, allowing internal resources to concentrate on high-value tasks.

### Benefits

- Reduced product management burden
- Leveraging external expertise for non-core products
- Cost savings, improved product quality, and shorter time-to-market
- Efficient resource allocation

Through our tailored services, we aim to empower your business, enhancing its adaptability, resilience, and overall success in a dynamic market environment.
